Whooping cough vaccination in Iqaluit

Start Date: July 22, 2016 **End Date:** October 21, 2016

Iqaluit 30 sec

Parents of children under the age of two are encouraged to have them vaccinated, as it's the best protection against whooping cough.

Vaccination against whooping cough is available for children and adults by appointment at Iqaluit Public Health at 975-4800.

Symptoms of whooping cough include:

- a cough followed by an unusual "whoop" sound or a funny sounding cough
- vomiting after coughing or not breathing after coughing
