

## **Public Service Announcement**

## Reminder to inspect heating oil tanks

Start Date: June 7, 2018 End Date: July 5, 2018

Nunavut-wide 60 sec

Homeowners and property managers may save significant oil spill cleanup costs if they take the time to conduct regular inspections and ensure proper maintenance of their heating oil tanks.

If water is allowed to accumulate in the drip leg, it will freeze and cause a crack in the pipe. As the weather warms and the water thaws, fuel will escape through this crack, causing a spill. The Department of Environment is encouraging all homeowners and property managers to take the time to conduct inspections of their heating oil tanks.

Tanks that show signs of rust or are over 10 years old should be replaced. Yearly service should be conducted by a qualified technician who can empty the drip leg (water trap).

The Illustrated Homeowner's Guide to Heating Oil Tanks provides information on how to properly inspect a hearing oil tank and to recognize potential spill risks. The guide is available in all official languages at:

https://www.gov.nu.ca/environment/documents

You may also contact the Department of Environment at 867-975-7700 or your local Wildlife Office to arrange for a free inspection of your fuel tank.
