Boil Water Advisory Reminder for Kugaaruk

July 4, 2023

Kugaaruk, Nunavut

The Department of Health is reminding all residents of Kugaaruk to continue to boil their water before consumption until further notice. This is a precautionary measure based on low and inconsistent levels of chlorine and high turbidity (cloudy water) levels in the water system.

During a boil water advisory all water for consumption must be brought to a rolling boil for a minimum of one full minute.

It is essential that all water be boiled for the following uses:

- Drinking.
- Preparing infant formulas.
- Preparing juices and ice cubes.
- Washing fruits and vegetables.
- Cooking.
- Brushing of teeth.

Water can be boiled either in a pot or kettle on a stove or an electric kettle without an automatic shut-off.

It is not necessary to boil water used for anything other than the above list.
